

## Introduction to CSS-02

In this lab assignment you style your travel photo-sharing website.

1. Create a new project in NetBeans called Introduction to CSS-02.
2. Copy the files from the Site Root folder from Lab 1 into the new project's Site Root folder.
3. Link your new project to GitHub and do an initial commit.
4. Open the chapter03-project01.html file so you can make changes. Also, run your project to open chapter03-project01.html in a web browser.

5. Create an external style sheet called reset.css (this will remove all the default browser formatting from the main HTML elements) as follows:

```
html, body, header, footer, main, nav, article, section, figure, figcaption, h1, h2, h3, ul, li,
body, div, p, img {
    margin: 0;
    padding: 0;
    font-size: 100%;
    vertical-align: baseline;
    border: 0;
}
```

6. Reference your new CSS file from inside chapter03-project01.html.
7. Create another external style sheet named chapter03-project01.css and reference it from inside chapter-03-project01.html.
8. Add styles to chapter03-project01.css so that it looks similar to the screen shot on the next page.
9. Here is a hint for the header:

```
header, footer {
    color: white;
    background-color: #1A237E;
    margin: 0em 4em 0.25em 4em;
}
```

## Final Page

Add styling to the  
:hover selector of all  
links. Use #00B0FF as  
the text color for links,  
and #F50057 as the  
hover background color

Define a sans-serif font  
stack for headings, and  
a serif stack for other  
text
